

VacuBerm™ Wash Water Reclaim Tools

Compliance with strict environmental laws is not an option ! Simply attach an industrial wet/dry vacuum to the **VacuBerm** and place in the path of water runoff. Wash water can then be quickly reclaimed, and pumped away. The **VacuBerm** allows you to work hassle free anywhere, anytime. The patented **VacuBerm** is the smart solution to compliance issues. They are..

inexpensive, very durable and easy to use.

Here's what's different from others..

Our tools are very inexpensive, they do NOT break easily, and they are the most efficient. The "VacuBerm" has many holes on its bottom side, and a filter-pad on its face, which acts like a big sponge. With a SandSnake holding it down, water is drawn off the surface very efficiently, allowing more tools off of the same vacuum, at greater distances. NO wasted Horsepower or CFMs ! It is so efficient, it can suck-up 3 to 5 gpm with a ShopVac, or many more gpm with a bigger vac.

SandSnakes DrainMats PuddleSuckers

..and many other accessories are also available. Complete systems are also available with ..**automatic pump out to 100+ gpm.** ..and **filtration** for **Re-Use** to 5 microns .. or better ..with **cleanable filters !**
